**If more than one search is submitted, please prioritize searches in order of need.**

**Provide the PALM Bib page or the following:**

(Total Pages including this sheet: 9)

Title of Invention: \_\_\_\_\_ Bib Data Sheet Attached \_\_\_\_\_

Inventors (provide full names): \_\_\_\_\_

Earliest Priority Filing Date: 6/5/2000

**Requested attachments:**

- If possible, provide the cover sheet, the IDS, examples, or relevant citations, authors, etc, if known.
- Please attach copies of the parts of this case that help explain or are most pertinent to this search. Examples are:  
*abstract, background, summary, claim(s) [not all of the claims].*

Abstract, Background & Summary of the Invention, and claim 63 included.

**The claimed or apparent novelty of the invention is:**

A bag for storing groceries at a customer's home.

**This search should focus on:**

(Also include keywords or synonyms)

-Putting groceries in an expandable bag attached to a box upon delivery. The bag has 2 openings. The customer opens a second opening to access the groceries.

If you have any questions or need help with keywords, please feel free to contact me.

Method of delivering groceries purchased over the internet

...ABSTRACT The grocery order is filled at the warehouse, where the groceries are placed in a tote for delivery. If perishable groceries are to be delivered, a frozen insert is placed in the tote to maintain the groceries at a desired temperature. The filled tote is placed on a rack, which is removable with the tote on it. The racks have shelves that are pitched such that when a first tote is removed a second tote behind the first tote falls into the space previously occupied by the first tote. In the early evening, after the cutoff time for placing orders, the rack and totes...

...transfer point where the rack and the accompanying bill of lading are transferred to a second smaller vehicle, such as a van. The van delivers the totes to customers along a pre-established...

...usually a customer's home) by early the next morning, the van driver removes the tote for that customer from the van and secures it in a locked expandable bag, such as a mesh net or insulated bag, that

Search Report from Ginger R. DeMille

may be locked in two places and that is itself secured to a grocery box . The grocery box , which is supplied to the customer by the business selling the groceries, is secured outside the delivery destination. The customer removes the tote from the bag , removes the groceries from the tote , and returns the used tote to the bag for later pickup by the van.

...SPECIFICATION of the delivery destination specified by the customer. The clerk places the groceries in a tote , which may be partitioned into at least two sections. To serve a larger area with...

...established. Means for maintaining the groceries at a desired chilled temperature are introduced into the tote when perishable groceries are to be delivered. These means may be, but are not limited to, a frozen insert placed into the tote before the tote is sealed or a chilled gas pumped into a portion of the tote .

After being sealed and filled with chilled gas (if necessary) the tote is placed on a rack that is mounted by a bracket or similar means onto a rack holder . The rack holder may have rollers on the bottom to enable the rack holder to be rolled with the racks thereon from place to place. The rack is removable from the rack holder with the tote on it and has shelves that are pitched or biased such that when a first tote is removed a second tote behind the first tote falls into the space of the first tote . There will generally be multiple racks of totes for delivery each day.

After the rack...

...order and the delivery destination. At the transfer point, the rack is transferred to a second smaller vehicle , such as a van. The transfer occurs usually in the late evening or early the...

...usually a customer's home, by early the next morning, the van driver removes the tote from the van for that customer and places it in a specially designed expandable bag , supplied to the customer along with a study, relatively small box in which the bag is stored when the bag is not in use. The box is permanently affixed to a post, such as to the ground or a door. Given its use in a method of delivering groceries, the box is referred to herein, for convenience, as a grocery box , although no groceries are necessarily placed within the box . The bag may be a mesh net or insulated bag secured by a cable or a chain to the box . An opening in the bag through which the tote is inserted is generally kept locked. Access to the bag may be available through two separate locks to permit separate access for the van driver and the customer.

To place the tote in the bag , the van driver removes the locked bag from the grocery box , opens a first of the two locks to gain access to the inside of the bag , inserts the tote in the bag , locks the first lock , and leaves the bag containing the tote on the ground near the grocery box while the bag remains secured to the grocery box . Multiple totes may also be simultaneously delivered and secured outside a delivery destination by placing the totes in a large size bag . The totes remain locked in the bag until the customer opens the second lock , removes the tote , closes the second lock and places the locked bag back into the grocery box . The customer thereafter removes the groceries from the tote and returns the used tote to the bag outside the grocery box before the next expected

Search Report from Ginger R. DeMille

delivery to that customer, at which time the delivery driver will pick up the emptied tote . The emptied totes are nestable within one another, allowing more than one emptied tote to be placed in the bag for return to the grocer. Rather than placing the bag with the tote outside the grocery box , a grocer may supply the customer with a grocery box large enough to place the bag along with the enclosed tote inside the grocery box .

The tote may be provided with a mechanism for securing the tote without the need for placing it in a bag at the delivery destination. In this alternative, the tote comprises a main structure, a cover, and a pair of eyelets, including a first eyelet...

...a section of which is looped through the first and second eyelets to secure the tote to the mounting means. The mounting means may comprise a storage container , such as a box in which the securing means may be stored when not used to secure a tote .

The multi-section securing means may comprise three sections, each having first and second ends. In this instance, when no tote is connected to the securing means, the securing means is secured to the mounting means...

...of the second section to the second end of the first section with a first lock , and locking the second end of the second section to the second end of the third section with a second lock . When the securing means is not in use, it may be stored in the storage container .

To deliver the tote having eyelets, the securing means is removed from the grocery box while remaining attached to the grocery box , the first lock is opened by the van driver/delivery person to separate the first and second sections...

...loop which is tightened to securely seal the cover to the main structure of the tote at a first position. The first and second sections are locked together with the first lock in a manner that tightly maintains the loop. A customer removes the second lock to disconnect the second and third sections and removes the loop formed with the second section from the first and second eyelets to disconnect and retrieve the tote . The customer may then lock together the second and third sections with the second lock , and store the securing means back in the grocery box when not in use. The customer wishing to leave the tote for pickup by the van driver at the delivery destination can secure the tote by looping the securing means through the first and second eyelets of the tote . A two-section securing means with a single lock , openable with two distinct mechanisms, such as two different keys, one for the van driver...

...on the exterior of the main structure, may be located on the exterior of the tote , such as on a second side opposite the first side. A second securing means, which...

...loop which is tightened to securely seal the cover to the main structure of the tote at a second position on the tote . In lieu of or in addition to the third and fourth eyelets, a hinge connecting the cover and main structure of the tote may be located on any side of the tote .

Multiple totes having eyelets may be secured by placing the totes adjacent to or stacked as well, if any, through the eyelets without requiring a bag to secure the tote .

Other objects and features of the present invention will become

apparent from the following detailed...

...of transporting the groceries between these locations;

FIG. 3 is an isometric view of a tote used for transporting the groceries;

FIG. 4 is an isometric view of a portion of a rack holder having pitched shelves on which the totes of groceries are placed;

FIG. 5A is a perspective view of a grocery box of the present invention as mounted on a well;

FIG. 5B is a cross-sectional view of the grocery box mounted to the wall along line 5B-5B of FIG. 5A and showing an expandable mesh net bag in its collapsed state that is stored within the grocery box when not in use;

FIG. 6 is an isometric view of the expandable bag in its fully expanded state with a two-way zipper used as a means for securing the tote within the grocery box ;

FIG. 7 is a top view of the bag of FIG. 6;

FIG. 8A is a top view of an alternative bag used as a means for securing the tote within the grocery box ;

FIG. 8B is a side view of the bag of FIG. 8A with a side of the bag unlocked;

FIG. 8C is a side view of the bag of FIG. 8A with a side of the bag locked;

FIG. 9 is a perspective view of multiple totes secured to a grocery box with two multi-section chains; and

FIG. 10 is a perspective view of a tote secured to a grocery box on one side with a single multi-section chain and on its opposite side with...

...the warehouse and load the groceries ordered by a particular customer into an appropriately-sized tote 200 (FIG. 3) or in a portion of tote 200.

Totes 200, which may come in different sizes (one possible size is 12"H ...

...designed to hold dry goods, refrigerated, and frozen products within a cavity 213 in the tote , and have a cover 205 to seal the cavity 213 of tote 200. The cavity 213 of tote 200 may be partitioned into multiple sections 217 with an insulated material 218 held within of cavity 213. For example, where a tote is 12"H x 12"W x 24"L, grooves 219 may be cut every 2 inches along the width of tote 200 at points between 4" to 16" from a first side 200a of the tote . The partition may also extend into the bottom 200b and cover 205 of tote 200 so that a section of the tote 200 can be pressurized with a chilled gas, like carbon dioxide or nitrogen, as described...

...202 entitled Process for Preparing Ice Substitutes may be inserted as a lining in the tote 200. The tote can then be sealed with cover 205. Another means of freezing or refrigerating the groceries within totes 200 is by first sealing tote 200 and then introducing a chilled gas, such as chilled nitrogen or carbon dioxide via a pressure relief valve 215 on the tote 200. The chilled gas may be introduced into the entire tote 200 or only a section 217 of the tote 200. The pressure relief valve 215 has a mechanism (not shown) for opening the valve before tote 200 is opened.

Where a frozen insert 210 is used, different combinations of cells having...

Search Report from Ginger R. DeMille

- ...combination with any insulation provided by the shell of or lining on the interior of tote 200. It is desirable to provide sufficient refrigeration and insulation to maintain the desired temperature...
- ...16 hours in an 80(degree)F atmosphere. If the groceries do not completely fill tote 200, packaging materials, such as Styrofoam or bladders, may be used to fill any voids in tote 200. The size of the tote 200 used to fill an order and the amount of fill need to fill a void in a tote 200 may be readily determined in any known manner at the time the order is entered on the Internet.
  - After an order is processed, the filled tote 200 is loaded onto racks 230 which are mounted on rack holders 235 in the...
- ...racks are slightly pitched downward over an angle (theta) so that after removal of a tote 200 from the front of rack 230, the next tote 200 behind the removed tote would fall into the space previously occupied by the first tote by gravity and/or the agitation of the truck's normal movement and/or by...
- ...When a pitch is used, the pitch should not be so large so that the tote behind the removed tote falls into place immediately.
  - After loading, the trailers 160 are dispatched (step 50), which in holders 235 have rollers and are transferred with racks 230, a rack holder 235 may be rolled easily from trailer 160 to van 180. As each van 180...
- ...of the order that the totes 200 are to be delivered so that the first tote 200 to be delivered is accessible to the van driver first, the second tote is accessible second, etc. The trailers 160 may also be loaded at warehouse 150 to...
- ...on a route sheet. Upon reaching a customer's home, the van driver removes the tote 200 from his van and brings it near a secure storage container, like a grocery box 260 which may be made of stainless steel and is bolted or chained to some...
- ...to a post, a door, a wall, or a floor. FIG. 5A shows one such box 260 mounted to a wall 270 away from floor 271. An expandable, secure bag 280, like a thick nylon or metal mesh net, or an insulated bag 280 which may be pleated and have a Mylar exterior, is stored in the grocery box 260 that is conceptually similar to, but generally smaller than, a milk box (step 80) and large enough to hold the bag 280. When empty, bag 280 is collapsed and folded within grocery box 260. Bag 280 is secured to the grocery box 260 with a chain or cable 275 (FIGs 5B and 5C) The driver opens an optional lock 262 on box 260, removes bag 280 from the grocery box 260, unfolds and expands bag 280, and places the tote 200 for that customer in bag 280. The expandable bag 280, when expanded, has first and second sides 281, 282. Tote 200 wrapped in bag 280 is placed on the ground adjacent to grocery box 260 while still attached to grocery box 260 with chain and cable 275 (FIG. 6). Bag 280 should be animal-proof and should be odor-proof so as not to attract animals. Alternatively, the tote 200 wrapped in bag 280 may be placed within grocery box 260 if grocery box 260 is large enough.
  - Bag 280 is cinched and locked (step 90) with a locking means to hold

Search Report from Ginger R. DeMille

tote 200 securely in bag 280. One contemplated locking means is a respective two-way zipper 283 having two sliding...

...is moved to its fully closed position at side 281 and through hook 286 to lock zipper 283 on this first end. This padlock 288 may be opened by the van driver to open the mesh, insert the tote 200 therein, and then relock the mesh 280. A second padlock 289 may be looped...

...piece is in its fully closed position at side 282 and through hook 287 to lock zipper 283 on this second end. The customer can unlock this second padlock 289 to remove the tote 200.

Alternatively, instead of having a zipper 283, bag 280 may be made of a mesh net 281 (FIGS. 8A-C) that has an...

...mesh net 281 may be spread open and the van driver is able to insert tote 200 within mesh 280'. The van driver then gathers together O-rings 294 on side...

...padlock 293 through these O-rings 294, and locks padlock 295. The customer can remove tote 200 by removing the customer's padlock (not shown) from O-rings 292 on the opposite side 293 of the mesh net 281. Where bag 280 is sufficiently large, multiple totes 200 may simultaneously be secured within bag 280.

Tote 200 remains locked in bag 280 until the customer retrieves the tote and returns the bag into the grocery box 260 (step 100). The customer thereafter removes the groceries from the tote 200, removes bag 280 from grocery box 260, unlocks the customer padlock on bag 280, places the used tote 200 and any frozen inserts 210, which are nestable, back inside the bag 280 secured to the grocery box 260, and relocks the padlock before the next expected delivery to that customer, for pickup...be required to put down a deposit to insure against loss or damage to the tote 200 and freezing insert 210. The van driver may also pick up used totes 200...

...where no deliveries are made. While described with reference to a method of delivering groceries, bag 280 of FIGS. 7 and 8A-8C may be used to secure things other than totes 200 of groceries, either in combination with a grocery box 260 of the type described or independently thereof.

FIG. 9 illustrates another manner in which a single tote or multiple totes may be secured outside a delivery destination, other than in a bag 280. Tote 200' is a modified version of tote 200 in which an eyelet 300 is located on the exterior of a first side of a cover 205' of tote 200'. A corresponding eyelet 302 is located on the exterior of the main structure 207' of tote 200' substantially beneath eyelet 300 on the first side of tote 200'. Otherwise, tote 200' may be identical to tote 200, such as having an internal cavity 213 within the main structure 207' and being similarly maintainable at a desired temperature inside cavity 213. As before, box 260 is mounted to a place 270 outside the delivery destination 190. However, rather than securing tote 200' inside a bag 280, tote 200' is secured to box 260 with a multi-sectioned chain 310 comprising sections 310a, 310b, and 310c. When not in use, chain 310 is stored within box 260 and box 260 may be locked with a lock, like lock 262 (FIG. 5A). Sections 310a and 310c are secured on their first ends 310aa, 310ca, respectively, to box 260, either at a single location on box 260 or at two separate locations therein. Section 310b is secured to a second end 310ab of section 310a

Search Report from Ginger R. DeMille

with lock 320 and is secured to a second end 310cb of section 310c with lock 321.

To deliver a tote 200', the van driver/delivery person opens box 260 (opening the lock, if any, to gain access to the chain 310 stored in box 260), and removes a portion of chain 310 that is removable from box 260 (some of chain 310 may remain in box 260 due to the placement of the mounting means of the first ends 310aa, 310ca somewhere inside box 260), while the respective first ends 310aa, 310ca of the first and third chain sections 310a, 310c, remain attached to box 260. The delivery person opens lock 320 (or lock 321, whichever he is given access to) and removes lock 320 from section 310b. The now loose end 310ba of section 310b is inserted through...

...sufficiently long middle section 310b, chain 310 can be used to secure more than one tote 200' by looping section 310b through eyelets 300, 302 on a first tote 200' A and then through similar eyelets on a second tote 200' B that is stacked above tote A (or placed nearby) to form loop 332 and to use loops 330, 332 to tighten the covers 205' of totes A and B to their respective main structures 207'. Lock 320 is then replaced to connect sections 310a and 310b. To keep the loops 330, 332 tight, lock 320 is inserted through link 310ba in section 310b that need not be the final...

...another link in section 310b.

The loops 330, 332 formed on the single side of tote 200' cannot by itself fully secure tote cover 205' to main structure 207'. Thus, a second pair of eyelets is placed on the opposite side of tote 200' from the side on which the first pair of eyelets is located, the second...

...to chain 310 and having sections 340a, 340b, and 340c, may be similarly attached to box 260 and looped through eyelets 342, 344 to form loop 346. Middle section 340b, if sufficiently long, may be used to similarly form a second loop 348 on a second tote 200' B stacked above the first tote 200' A. Chain 340 may likewise be stored in box 260 when not in use.

In lieu of second chain 340 and the second pair of eyelets 342, 344, a tote 220", which is another variation of totes 200 and 200', may comprises a first pair...

...the first side to securely connect the cover 205" to the main structure 207".

Where tote 200' or tote 200" is used, the customer retrieves tote 200' or tote 200" by removing lock 321 to separate sections 310b and 310c and removing the loop created with section 310b through eyelets 300, 302. Additionally, second chain 340 must be removed from tote 200'. After removing tote (s) 200', the customer returns lock 321 to reconnect chain sections 310b and 310c and chains 310, 340 may again be stored inside box 260.

Other embodiments for achieving the objectives of the invention may utilize, for example, a two-section chain lined by a single lock having multiple ways of opening the lock, including one way that only the delivery person can use to open the lock and a second way that only the customer can use to open the lock.

The above-described method offers many advantages over the prior art. Because there is no...

...a greater number of potential customers. The sales representative can provide and install the grocery box, provide an introductory coupon,

Search Report from Ginger R. DeMille

send a personal note on significant occasions, such as birthdays and...

...distributing groceries, some customers may not wish to have their groceries delivered in a secure bag outside their home. These customers can be accommodated by giving them the option of shipping a tote 200 of groceries through another delivery method, such as regular next day delivery by an overnight delivery service such as the United Parcel Service. Using next day delivery, groceries in tote 200 can also be kept at the desired chilled temperature using a similar refrigeration method...

...CLAIMS A2

1. A method of securely delivering to a delivery destination a tote for holding an item, the method comprising:  
providing a tote comprising a cover, a main structure, and a pair of eyelets on an exterior of the tote, including a first of the pair of eyelets on exterior of the cover and a...

...the exterior of the main structure substantially in proximity to the first eyelet;  
delivering the tote to a delivery destination; and  
securing the tote substantially at the delivery destination by connecting a securing means to a mounting means substantially...

...the pair of eyelets to securely tighten the cover to the main structure of the tote.

2. The method of claim 1, wherein the step of securing the tote comprises securing the securing means to a storage container mounted in proximity to the delivery destination, and the method further comprises holding the securing means inside the storage container when the securing means is not in use.

3. The method of claim 1, further comprising placing a grocery item into the tote and maintaining the grocery item at a desired temperature by placing a frozen insert in the tote in proximity to the grocery item.

4. The method of claim 1, further comprising placing a grocery item into the tote and maintaining the grocery item at a desired temperature by feeding a chilled gas into at least a portion of the tote.

5. A system for securely delivering to a delivery destination a tote for holding an item, comprising:

a tote comprising a cover, a main structure, and a pair of eyelets on an exterior of the tote, including a first of the pair of eyelets on the exterior of the cover and...

...structure substantially in proximity to the first eyelet; and  
a securing means for securing the tote substantially at the delivery destination by looping a portion of the securing means through the pair of eyelets to securely tighten the cover to the main structure of the tote.

6. The system of claim 5, further comprising a storage container mounted in proximity to the delivery destination for holding the securing means when the securing means is not used to secure the tote, and wherein the securing means comprises means for securing the tote to the storage container.

7. The system of claim 5, further comprising a second tote comprising a cover, a main structure and a second pair of eyelets, and wherein the securing means further comprises means for securing the cover of the

Search Report from Ginger R. DeMille

second tote to the main structure by looping the securing means through and around the second pair...

- ...method of distributing groceries comprising:
  - placing a grocery item ordered by a customer in a tote ;
  - placing the tote onto a removable rack in a warehouse;
  - transferring the rack with the tote thereon into a first vehicle; and
  - dispatching the first vehicle to deliver the grocery item...
- ...warehouse and a delivery destination, and the method further comprises:
  - transferring the rack with the tote thereon from the first vehicle to a second vehicle ; and
  - delivering the tote to the delivery destination using the second vehicle .
- 10. The method of claim 9, wherein the second vehicle is smaller in size than the first vehicle.
- 11. The method of claim 9, wherein the rack on which the tote is placed is pitched such that when a second tote is located on the rack behind the first tote and the first tote is removed, the second tote falls into a space previously occupied by the first tote by at least one of gravity and the agitation of the movement of one of the first vehicle or the second vehicle .
- 12. The method of claim 8, further comprising:
  - establishing a plurality of warehouses to stock...
- ...a plurality of delivery destinations.
- 13. The method of claim 8, further comprising delivering the tote to a delivery destination by placing the tote into a secure expandable bag attached to a box situated outside the delivery destination.
- 14. The method of claim 13, wherein the bag has a collapsed state and an expanded state, and the method further comprises storing the bag in the collapsed state within the box when the bag is not used to store the tote , and removing the bag from the box , and expanding the bag to the expanded state before placing the tote therein.
- 15. The method of claim 14, wherein the bag has a lock to secure an opening in the bag , and the method further comprises opening the lock to provide access to place the tote in the bag , and locking the lock after placing the tote in the bag .
- 16. The method of claim 15, wherein the first opening provides access to a delivery person who opens the first lock , and the bag has a second opening and a second lock to secure the second opening , and the method further comprises a customer opening the second lock to gain access to remove the tote from the bag .
- 17. The method of claim 8, wherein the ordered grocery item requires refrigeration or freezing...
- ...method further comprises maintaining the grocery item at approximately a desired chilled temperature within the tote .
- 18. A method of ...grocery item from a customer;
  - placing the grocery item ordered by a customer into a tote at a warehouse;
  - placing the tote into a first vehicle;
  - transferring the tote from the first vehicle to a second vehicle at a transfer point, and
  - delivering the grocery item to the delivery destination using the

Detailed Description  
Claims

English Abstract

A food storage and serving bag which includes an open top enclosure having a base surrounded by at least one generally...

Detailed Description

TITLE OF INVENTION: Food Storage and Serving Bag  
INVENTOR: Pamela D. Monson, Middleton ID.

D E S C R I P T I...

...invention generally relates to packaging for food articles. More particularly, this invention relates to a bag for food which can provide secure storage during transport and consumption, and contribute to highway...

...and a refuse receptacle for wrappers, sauce packets and the like, as well as a bag which can provide new promotional, entertainment and educational opportunities.

Background. Most people can appreciate the...

...used the phrase "dashboard dining."

Normally, fast food articles are individually packaged within a suitable container such as paper cups for drinks, clamshell cartons, paper wrappers or small bags for sandwiches, and paper bags or open cartons for finger foods such as french fries. These individual articles are then placed in a larger paper bag for transport from the restaurant. Unfortunately, these larger bags greatly reduce the accessibility to the food for consumption. The limited access is the result of the bag providing only unidirectional vertical access. This difficulty is further complicated by a narrow line of sight to the food items contained within the bag.

Because it is very inconvenient to eat from the larger bag, oftentimes all the articles are removed from the bag by the consumer for consumption.

Additionally, waste materials generated during consumption, such as straw wrappers...

...avoid stains and disposed of to avoid litter.

As each article is removed from the bag, it is usually placed somewhere in the vehicle such as on the car seat, between...

...wasted food supplies and lost income from negative publicity. fact, be difficult to design a container better suited for causing inattention than the standard paper sack.

The problem of food related...

...problem on the rise.

Another safety problem arises when the food is removed from the bag and

Search Report from Ginger R. DeMille

placed on surrounding ...and the food served.

U.S. Pat. No. 4,708,248 teaches a fast food **bag** which includes employing stiffer interior support members configured to form a cup **holder** and a food platform. While this invention provides a more secure transport mechanism, it does...

...food accessibility or lack of apron protection.

German Pat. No. 1804423 teaches a fresh vegetable **bag** which includes a crosswise perforation around three sides of the **bag** and an intersecting lengthwise perforation down the center of one of the three sides, which

...  
...does it contribute to food or roadway safety.

What is needed is a consumer friendly **bag** or sack which provides convenient physical and visual access to contained fast food items and...

...to provide a clean surface to place food articles on during consumption. This type of **bag** or sack will allow both the consumer and the restaurant industry to adapt a pro...

...needs are satisfied, as well as other advantages realized, by a food storage and serving **bag** which includes an open top enclosure having a base surrounded by at least one generally...

...or similar mechanisms or means which facilitate the physical separation of two portions of the **bag** material along a predetermined path, as well as facilitating folding of partially separated panels away from other portions of the **bag**. Even fold lines, such as those used to form the **bag**, or directional indicia printed on the **bag** can serve as separation facilities. Advantageously, folds or creases compromise the structural integrity of the **bag** material along a predetermined line to facilitating separation of the **bag** material along the line by tearing.

Additionally, the separation facility may be manufactured using a...

...that used on Post-It® notes to removably seal one or more seams in the **bag**.

The separation facility and the **bag** material are selected to be mutually compatible, which generally means that durable **bag** materials require more aggressive separation facilities while less durable materials require very little encouragement to separate along a predetermined path. Suitable **bag** materials include paper, paperboard, cardboard, plastic, natural and synthetic fabrics, plastic, foil and wax coated...

...or more of these materials. In the case where reusable materials are employed as the **bag** material, the separation facility can

6

include mechanisms such as zippers, hook and loop fastening...  
...separation facility can be used to form decorative silhouettes, shapes

Search Report from Ginger R. DeMille

and pop-outs in the bag and/or the apron as well as totally separating one portion of the bag from the remainder of the bag, as may be desired to form a play mat, game piece, advertising and education media ...

...claims.

DETAILED DESCRIPTION OF THE INVENTION

Referring now to the figures, several embodiments of a food storage and serving **bag** according to the invention will be described in detail.

These

1 2

embodiments have been implemented using a perforation separation facility in conjunction with a rectangular paper **bag** similar to those familiar with fast food packaging. It should be noted that the invention...

...lines and seam lines which a typical manufacturer uses to form a rectangular shaped paper **bag** which here has been selected to illustrate the invention. However, it should be noted that the invention does not require a particular configuration or composition of **bag** as long as it is a generally open top enclosure having a base surrounded by...

...including a generally vertical longitudinal axis.

The folds and seams which define a standard paper **bag** may have separation paths or facilities which lie coincident with them. For example, the separation...

...9, S-1 0 and S-1 2, which define the corner edges of the **bag**, lie coincident with separation paths or facilities 7, 97 1 0 and 12. Similarly, separation...

...be varied to define other configurations and are within the scope of this invention. Most **bags** are symmetrical about one or more axes so 1 0 that the nomenclature is relative...

...is here defined as a single side receptacle configuration of the food storage and serving **bag** 100.

Food **bag** I 00 is formed by separating **bag** 1 01 along paths 2, 3 and 4. The upper portion of **bag** 1 01 is then folded back along path 5. Additionally, the top edge of **bag** 1 01 is folded over on itself to form

Search Report from Ginger R. DeMille

an upright truncated compartment  
103 having...

...a second configuration of a single side trash receptacle configuration of food storage and serving bag 200 according to a second embodiment of the invention. Food bag 200 is formed and functions similarly to food bag 100 with the exception that the top edges of bag 201 are taped to a bottom portion of upright truncated compartment 203 using tape segments...

...third possible configuration of a single side trash receptacle configuration of food storage and serving bag 300 according to a third embodiment of the invention. Bag 300 is similar in all respects to bag 100 with the exception that bag 301 is separated along paths 21, 22 and 23 to form an upright truncated compartment 303 having a lower front edge. Receptacle 302 is similar to receptacle 202. Additionally, the bag can be separated along the lines 2, 3 and 4 to remove a depending portion of bag 301 so as not to interfere with use of receptacle 302. Alternatively, this portion of bag 301 can be folded over into the interior of receptacle 302.

Fig. 8 illustrates a fourth possible configuration of a single side trash receptacle configuration of food storage and serving bag 400 according to a fourth embodiment of the invention which is here defined as a single side trash receptacle configuration of food storage and serving bag 400. Bag 400 is similar  
14

in all respects to bag 300 with the exception that the top edge of bag 401 is taped to a bottom portion of upright truncated compartment 403 using tape segments...

...as a first version of an upright truncated compartment configuration of food storage and serving bag 500. Food bag 500 is formed by separating bag 501 along paths 2, 3w 4 and 5 to form upright truncated compartment 503 and a detached separate panel 502. Panel 502 is actually the upper portion of bag 501 which can be used in as a protective apron or mat, or simply discarded...

...which is here defined as an upright truncated compartment configuration of food storage and serving bag 600. Food bag 600 is for my separating bag 601 along paths 5, 21, 22 and 23. This forms and upright truncated compartment 603...first version of a single side lap apron configuration of the food storage and serving bag 800. Food bag 800 is formed by separating bag 801 along paths 1 1 1 D, 21 B, 21 A, 22 and 23. The...

...the truncated compartment 803 defines a food storage and serving tray. The primary distinction between bag 800 and bag 700 is that bag 800 provides a lower front edge to truncated compartment 803 to facilitate access thereto.

Figs...

...here defined as a double separate apron upright compartment configuration of food storage and serving bag 1300. Food bag 1300 is formed by separating bag 1301 along lines 1 7 ID, 5A, 513, 6, 21 A, 21 B, 22 and 23. Aprons 1302 are formed by separating the upper portion of

Search Report from Ginger R. DeMille

bag 1301 along a center line.

Fig. 13 illustrates a ninth possible embodiment of the invention...

- ...a first version of a double side lap apron configuration of food storage and serving bag 1600. Food bag 1600 is formed by separating bag 1601 along lines 8, 11, 65, 66, 69, and 70. The resulting attached panels one...
- ...second version of a single side lap apron configuration of a food storage and serving bag 2000. Food bag 2000 is formed by separating bag 2001 along lines 8, 11, 41, and 42. The resulting attached panel 2002 is then...
- ...second version of a double side lap apron configuration of a food storage and serving bag 2100. Food bag 2100 is formed by separating bag 21 01 along lines 3A, 3131 4AY 4131 8, and 1 1. The resulting attached...

Detailed Description

Claims

English Abstract

A foldable bag (10) comprising a laminate panel section (24) and a plurality of pockets (41). The bag is foldable to assume a folded closed configuration, an unfolded flat configuration, or a folded open configuration. The bag (10) is adapted to be supported by a support structure, such as a chair back...

Detailed Description

MULTI-PURPOSE FOLDABLE TOTE BAG

BACKGROUND OF THE INVENTION

1. Field of the Invention

This invention relates generally to a tote bag and, more specifically, to a foldable bag which may be folded into a closed configuration for transportation of items therein, and which...

...storage, and access of items therein.

2. Background of the Related Art

A number of tote bags, garment bags, backpacks, etc. have been

Search Report from Ginger R. DeMille

disclosed  
as devices for the transportation of various items. For example...

...a suit carrier.

U.S. Patent No. 5,653,337 to Cirigliano discloses a reversible tote bag for storing, displaying, accessing and carrying tools. The tote bag has a reversible folding wall which includes a display panel having individual compartments for  
I...

...storing tools. A reversible zipper, extending along the periphery edge of the sides of the bag, allows the sides of the bag to be closed with the display panel either on the exterior or on an interior...

...No. 5,628,439 to O'Hara discloses a portable desk and cooperative file folder holder for use in a seat. The desk includes a horizontally disposed rectangular base member, which...

...convertible article carrier, e.g., for carrying and storing various tools, that is essentially a tote bag that is able to an apron having a belt, with the belt functioning as a...

...strip.

U.S. Patent No. 5,113,982 to Pulichino et al. discloses a garment bag that includes an outer panel, a pair of sides, integral ends, and an inner panel that includes first and second inner panel sections. The bag may be suspended from a hook provided at one end of the bag, and either of first and second inner panel sections may be opened or closed independently...

...U.S. Patent No. 4,960,204 to Young et al. discloses a flexible travel bag for carrying, storing, and transporting its contents in a closed, folded position. The bag may be hung in a vertical open position to enable ready access to the inside of the bag.

U. S. Patent No. 4,887,751 to Lehman discloses a compartmental luggage or travel bag of soft, frameless, sewn or stitched construction employing flexible fabric having an inside and an outside surface. The bag is capable of being fully unfolded to an open condition of display usage.

U.S. Patent No. 4,804,084 to Markovich discloses a foldable garment bag which incorporates a retainer assembly to suspend and retain closure panels in an open upright configuration. The retainer assembly attaches to the bag by a fabric sleeve, and includes a tubular housing, two telescopic subassemblies, and two attachment subassemblies.

U.S. Patent No. 4,738,360 to King et al. discloses a garment bag adapted to fold into a suitcase-like configuration, and capable of being suspended in a...

...598,803 to Ghiassi discloses a compact carry-on luggage assembly that includes a garment bag, a carry-on bag, and a toilet kit. Snap-hook means are adapted for attaching the toilet kit across the center of the inner surface of the garment bag.

U.S. Patent No. 4,169,550 to Williams discloses an emergency medical kit

Search Report from Ginger R. DeMille

and/or the tray or tote can be rechecked.

The perishability information can be used to ensure that products are removed...can be scanned as it moves past various points in the system.

I O 9. Tote

Totes are storage containers used to hold products for transportation to the consumer. There may...

...some totes may be designed for holding frozen and refrigerated goods. Like the trays, each tote has an identifier to support automated movement through the distribution center by conveyor. The distinction...

...different products would be comprised of ten pick tasks. However, if the order included five bags of Brand X potato chips, that might be consolidated into a single pick task -- depending on the number of bags I O of potato chips in the pod. For example, if pod two had only two bags of potato chips left and pod three had the last three bags of potato chips, two pick tasks would be required.

a) Carousel Pick Task

Carousel pick tasks require the coordination of the conveyors to transport the 15 tote to the appropriate pod with the carousels to bring the appropriate storage tray to an...

...the actual physical movement of the product, or products, from a carousel tray to a tote.

In some cases, a pick task may be used to move products from one tray...

...date into a single tray.

Once the pick task is accomplished, the conveyor moves the tote to the next destination automatically. In some embodiments, a push button signal is employed to...

...pick operator to signal that she/he has placed the product, or products, into the tote.

- 13

b) Mechanized Pick Task

Mechanized pick tasks can be accomplished by using carts to...

...put into the totes for delivery. Once the necessary items are in the totes, the tote is placed on the outbound conveyors.

c) Manual Pick Task

The process for manual pick tasks is similar to the mechanized pick task. The tote that arrives on the inbound conveyor is scanned. A list of locations with items for the tote is displayed. An operator retrieves the indicated items from the listed I O locations and then transfers the tote on the outbound conveyor. In some embodiments, a single operator performs all of the manual...

...order preparation areas to the manual pods for placement (pick tasks) into totes. When the tote for Mrs. Smith arrives at the manual pod for

Search Report from Ginger R. DeMille

pick tasks, the identifier on the tote will be matched with the location, or locations, within the manual pod that have items... resources.

For example, if the Palo Alto station serves five subzones with twenty vans and two trucks on most days, then if a consumer in a subzone of the Palo Alto station...East Route Name Orinda West  
Departure Date Thursday 1/2/99 Departure Date Thursday 1/ 2 /99  
Vehicle Truck 16 Vehicle Van 53  
Driver John Doe Driver Mike Smith  
Stor) Address Arrive Leave...

...12345 is a parent route to the van route 23456. If the truck contains a tote for a customer in the van route, e.g. the tote for Customer - Jones, then this relationship can be seen in the itinerary for the tote. For example, a tote could have an itinerary as shown by the following table.

Tote Itinerary

Tote LR88888

Shipment Jones 123

Customer Jones

Itinerary Truck Route 12345

Van Route 23456

Usually a tote for a consumer is transported by truck from the distribution center to a station or...the intake of goods into the system and having those goods put into the correct tote, truck, and van.

1. Put A@Lqa Planning

The distribution center 120 systems plan for...when appropriate.

2. Pick Planning

The pick planner determines the activities required to assemble a tote or a group of non-conveyables, e.g. items not transportable by the conveyors, to...

...which the shipment already has a pick task.

The order of pick tasks for a tote can take into account the pod order. For example, the picking order in the ambient pods for a tote might be Pod 4, 6, and 9, but i o not 6, 4, and 9...

...range can be used as a quality check. The due time is the time the tote should reach the final stop. Special instructions allow for messages and special handling.

For example...

...quality control check will be determined based on the prices of the items in the tote, a sampling system, e.g. to ensure a certain number of spot checks, the current...

...can be used to trigger gift wrapping of one or more items in an assembled tote. The pod where the gift wrapping will occur is determined by the pick planner in...

...pick planner uses the cube, e.g. volume, and/or weight capacity information of a tote together with the corresponding information about

## Search Report from Ginger R. DeMille

items to prevent overfilling.

The pick planner sequences the...

...and more specifically a lane at the outbound dock, is the last stop for a tote before loading, in some embodiments. For non-conveyables, e.g. items that can not be...path is a type of conveyor plan having a series of pod destinations that a container should traverse. The path can include all stops, including the last stop, which for totes...

...result. These are the readings from sensors along conveyor lines that can detect a stopped container, etc.

In one embodiment, the carousel system notifies the AMH 286 when a batch of...

...the exact order as specified in the path. If a pod is full, then the container recirculates until that stop can be made.

In contrast, dynamic paths are provided to the...

...when there is an overflow condition in pod 3, for example. In that case, the tote could be directed to pod 6, rather than re-circulate to pod 3. After pod 6, the container 15 would move to pod 3.

If the stops are flexible, then the AMH...

...the last one. When possible, the AMH 286 instructs the pod operator to place the tote on an express conveyor after the last stop.

### 2. Response Times

When the AMH 286...

...releasing totes can occur if the AMH 286 sends many paths calling for the same tote type at a time. The carousels plans are executed when the containers arrive in the...

...complete. The pick and put-away planner 282 may include a start time in the tote plan to assist the AMH 286 in inducting the tote.

The AMH 286 can be programmed to work in a just in time (JIT) fashion... does not recognize are pathless containers. The conveyor will send a message noting the pathless container and the AMH 286 will attempt to re-route the container. If that is not possible, the AMH 286 will direct the container to an appropriate temperature environment for exception handling.

### 4. AMH - Conveyor/Carousel Path Selection

In...

...to I O determine which conveyor to use. The first rule is that if a container, because of its type, e.g. shape/weight, requires one of the two levels, then...

...ftill and upper not more than Y% full.

### 5. AMH - Conveyor Responsibilities

The conveyors manage container movement on the conveyor equipment. The conveyors direct the movements of containers into and out...

Search Report from Ginger R. DeMille

...specific containers and the conveyors do the work.

In one embodiment, the conveyors route a **container** to a destination until a destination task complete message is received from the AMH 286. This ensures that a - 50 **container** will not continue to the next destination in a path until all tasks are completed...

...The conveyors are able to induct totes at the direction of the AMH 286 from **tote** release areas. The plan provided by the AMH 286 will not include an identifier for the **tote**, but rather a **tote** type. The **tote** identifier is scanned by the conveyor prior to being inducted out of the **tote** release area, and the identifier is supplied to the AMH 286 for further use.

If the **tote** in the release area is not the correct type, an exception can be raised and the **tote** may be held until the exception is resolved. In some embodiments, 10 additional **tote** releases can continue while the exception is handled. In some embodiments, the **tote** is held until the right type of **tote** is available. In other embodiments, the release is held until the right type of **tote** is available.

The conveyors automatically re-circulate containers when they are not diverted into their...

...circulations can be reported to the AMH 286 either immediately on diversion, or when the **container** is resorted.

The warehouse management system 288, e.g. MOVETM, may include a maximum and a minimum gross weight for each **container**. For totes, this is the expected weight range when the picking is complete, or at...

...button press can be used to indicate that the item has been placed into the **tote**. One further optimization is to provide a task complete button near the carousel. The operator...  
...for a second task complete button to be pressed after the item is in the **tote**.

The put away and pick tasks can be optimized in several ways. In one embodiment...

...e.g. cost of item, spot check of inventory, and/or other parameters.

When a **tote** is at its last pod stop, it is usually positioned on the upper conveyor in some embodiments. The AMH 286 instructs the carousels to tell the operator to put the **tote** onto the express conveyor.

- 52

The AMH 286 plan will include messages to the carousels to notify the operator to **bag** items when appropriate.

#### 7. AMH - Implementation

In some embodiments, the AMH 286 models the sequence of messages sent, and expected, using a modified finite state machine. More specifically, each **container** can be thought of as traversing a set of states. At each state, one or...the products into trays at receiving 606. For example, Brand X potato chips 16 oz. **bags** may come packed in cartons of twenty **bags**. The receiver opens the carton and transfers the **bags** into trays.

Search Report from Ginger R. DeMille

1 5 The receivers 624 may have wireless scanners for reading the universal...

...pod.

When required based on the SKU, the receiver 624 is notified that they should **bag** an item.

In some embodiments, the system determines the optimal tray size based on i...the shipment.

The receiver 624 checks in damaged product using the appropriate codes and the **container** can be automatically routed for quality control and review.

More than one receiver 624 can...

...complete. This causes the system to display the next action and allows the tray or **tote** to be moved by conveyor to the next destination. For example, in front of the...

...indicate how many of the picked items are to be placed in each tray or **tote** currently stopped on the conveyor in 1 5 the pod. The operator places the items...

...the appropriate locations. A pick may include several eaches for more than one tray or **tote**, this can be combined into one pick action.

For put away operations, a tray of...pick tasks. When the mobile device is used to read the identifier associated with a **tote**, the pick tasks associated with that **tote** are provided to the operator 626 in the form of location, SKU, and quantity information...

...signal the completion of the pick tasks. When all of the pick tasks for a **tote** are complete, the **tote** is moved to the outbound conveyors.

In some embodiments, pick tasks for items stored in...

...the item to be known when it comes time to deliver the item into a **tote**

- 61

. Outbound Dock Operations

The outbound dock operators 630 processes totes leaving the distribution center...

...outbound dock areas 620. Additionally, the operator 630 processes empty totes -- for return to the **tote** station 604, returned products and/or other things coming back from the stations.

In some...

...the stations, they are then rolled onto vans. Thus, during normal operation, there is no **tote** by **tote** handling, or organizing needed once the **tote** is placed in the dolly.

In some embodiments, totes are not pre-sorted within a...

Search Report from Ginger R. DeMille

...van route may have fifteen large ambient totes. It has been observed that selecting one tote out of a group this size will take less than fifteen seconds.

A shipping spur...is indicated. In some embodiments, the operator 630 uses a mobile device to scan the tote, and the mobile device indicates the floor location. At placement, the system may request that the operator 630 scan the tote and the floor location identifier to confirm placement of the tote.

The operator 630 can preview the truck route summary to check the status of the...

...the dollies. The operator 630 matches totes to dollies. Exceptions will be noted if a tote is in an improper floor position, e.g.

positioned for the wrong ultimate van route...

...dollies contained totes with multiple destinations, the station operator would be notified and unload that tote. In normal operation, this should not be necessary.

At the station, the dollies can be...

...the shipments. A 1 5 shortage within a load item occurs when, for example, a tote on a dolly is missing

2. Tote to Door Process

If the customer is not at home, the courier can check the...the consumer's door in some embodiments.

The MFD 265 is used to scan the tote(s) and/or item(s) to be returned. In one embodiment, this includes providing a...

...be out of previous shipments to the consumer. For example, if the consumer ordered a box of popcorn a week earlier, the consumer can return it in some - 66 embodiments. The...

AB- PURPOSE: To always receive clothes to be laundered and to deliver the  
laundered clothes in a stable, sure and simple way by providing a  
storing box for the clothes to be laundered and a control part  
which controls the operations of each means and mechanism.

CONSTITUTION: When a user puts his magnetic recording card into a  
card slit 7, the information on the card is read by a magnetic record  
reading device built in a control part 2. Then the read information  
is collected with the usable customer information inputted previously  
at the control part 2. An auto - lock state is cancelled in  
response to the result of collation, and a door 3 opens for reception  
of the clothes to be laundered. A usable customer throws a bag  
containing the clothes to be laundered and preferably a detailed  
statement slip showing the types and number of clothes to be  
laundered into a storing box through a throw-in port. When the door  
3 is closed, the card is ejected through the slit 7. At the same  
time, a reception form showing the data of reception, a serial  
number, the usable customer number, etc., is issued through a printer  
ejecting port 8 for the clothes to be laundered.

Masterfoods is on track for Christmas

UK: Masterfoods unveils new Xmas confectionery gifts  
Grocer (GR) 27 Jul 2002 p.52  
Language: ENGLISH

Low price, children's play value and innovation have proved to be the main themes behind Masterfoods' three new products, recently unveiled for its Christmas range. The Dolls House colouring box has a colouring set in addition to the sweets (t2.79), and the Rally Selection Box turns into a race track with two cars and pop-up traffic cones. The Skittles Paint Kit comes in a reusable tin, with ten bags of skittles, a paint brush and stickers (t4.99). According to the company, the Xmas confectionery market grew 3.9% in 2001, reaching GBt 121mn (US\$ 187.6mn). Advent calendars and branded gifts have been markedly good performers. Further branded new offerings from the group include a Harry Potter Secret Desk Selection Box and Advent Calendar, the latter in particular standing to benefit from the second Harry Potter film to be released in November. The latest additions to the range should reach cash and carries in August.

Hitachi Zosen bags \$100m carrier orders  
SINGAPORE: HITACHI ZOSEN CLINCHES S\$ 100 MN DEAL  
Business Times (XBA) 15 Nov 1996 P.21  
Language: ENGLISH

Singapore's Hitachi Zosen Singapore Ltd (HZSL) has won a S\$ 100 mn shipbuilding order to deliver 4 dry cargo/ container carriers. The vessel deal was signed with Clipper Shipping, and it comes with an option for 2 additional carriers. HZSL will deliver the first two vessels in 1998, with the remaining two in 1999. Upon delivery, two of the vessels will be owned under the name of the Hai Sun Hup Group, which holds a 50% stake in Clipper. Nonetheless, all 4 ships will be crewed and managed by Ow Ship Management, a unit of Hai Sun Hup.

Long tunnel mucking involves use of two conveying trucks that individually conveys filled muck container bag to halfway point of tunnel and finally to outer side of tunnel

Abstract (Basic):

... removed from the tunnel (8) through a muck conveying truck (20) which transports the filled container bag (10) from a loading point (A) and to a halfway point (B) of the tunnel. The collected container bag is transferred to an awaiting conveying truck which finally moves the filled container out of the tunnel.

... Container bag (10

GARBAGE CONTAINER

ABSTRACT

PROBLEM TO BE SOLVED: To provide a garbage container which is kept clean and does not produce bad smell, by washing a bottom of the garbage container with water, in a structure of the garbage container detachable, and which separately contains garbage by hooking a plurality of carrier portions of plastic bags on an opening of the garbage container, thereby setting a plurality of the plastic bags on one garbage container.

SOLUTION: This garbage container comprises a cylindrical container body 5 provided with an upper opening 12 and a lower opening 7 on upper...

... respectively; a hook structure 4 formed to hook a carrier portion 3a of a plastic bag 3; and a receiving dish 8 detachably fitted to the lower opening 7.

DEVICE FOR TYING MOUTH OF BAG FOR SCREENING RESIDUE

ABSTRACT

PURPOSE: To automatically tie the mouth of a bag packed with a fixed quantity of screening residue collected from channels in a sewage disposal ...

...CONSTITUTION: Bag -holding frames 9, in each of which an empty bag 7 to be filled with dehydrated screenings residue is set, are arranged at regular intervals...

... This turntable 8 is turned pitch by pitch intermittently with the interval between two adjacent bag -holding frames 9 as one pitch. At a mouth-tying position above the turntable 8 a bag -holding means is provided; each bag -holding means consists of bag grippers 10 provided externally and a cord holder which supports two tying cords forming loops passed through the mouth of the bag and hitched to the cord holder itself. Hooks 13 are passed through the loops of the tying cords, which are hitched to the cord holder, and to make up a mouth-tying movable device 14, two trucks 18 for the hooks are provided as means of tying the mouth of the bag by moving the hooks 13 away from each other.

Appts. for transferring semiconductor wafers from one carrier (C1)  
to a second (C2) turns the carriers so that their openings are directed  
downwardly, and has a **holder** (31) with a top opening and which can be  
moved to align with either of the carrier openings. A wafer support  
(33) is movable downwardly from adjacent the first carrier opening into  
the **holder** , and then upwardly from the **holder** to the **second**  
**carrier** , and the carriers are finally turned into their original  
positions.

The wafer support is pref. of plastics to prevent wafer damage, and  
the wafers can enter the support under their own wt.. The wafers are  
pref. held in the carriers by retainers (20) which cease to act when  
the support takes the wt. of the wafers.

ADVANTAGE - Holds wafers stably and prevents damage.

A wafer transfer apparatus (100) for transferring wafers in a first

Search Report from Ginger R. DeMille

wafer carrier (C1) to a second wafer carrier (C2) through a first opening and a second opening provided in the first (C1) and second (C2) wafer carriers respectively, said apparatus comprising:- (a) a carrier turning means (10) for turning the first (C1) and second (C2) wafer carriers from an original state to a state in which the first and second openings are directed downwardly, (b) a wafer holding means (31) for holding the wafers which are being transferred from the first wafer carrier (C1) to the second wafer carrier (C2), said wafer holding means (31) comprising a third opening which is directed upwardly to face the downwardly directed first opening when wafers in the first wafer carrier (C1) are transferred to the wafer holding means (31) and to face the downwardly directed second opening when wafers held in the wafer holding means (31) are transferred to the second wafer carrier (C2) by relatively moving the position of the wafer holding means (31) into correspondence with the positions of the first (C1) and second (C2) wafer carriers respectively, and (c) a wafer supporting means (33) for supporting the wafers which are being transferred from the first wafer carrier (C1) to the wafer holding means (31), when the wafers in the first wafer carrier (C1) are being transferred to the wafer holding means (31), installing the wafers from the first wafer carrier (C1) into the wafer holding means (31), and supporting the wafer which are being transferred from the wafer holding means (31) to the second wafer carrier (C2), when the wafers in the wafer holding means (31) are being transferred to the second wafer carrier (C2). (13pp)|

AB- <US> US 4744715 A

Wafer transfer appts. includes a holder for temporarily holding the wafers during transfer from one carrier to another. The holder has an opening directed upwards through which the wafers are transferred. The carriers are turned so that respective openings in the carriers are directed downwards facing the opening in the holder. A supporter supports the wafers when they are transferred from the first carrier to the holder and then to the second carrier. A maintainer in the carriers maintains the wafers in the carriers when the carriers are turned. A transfer device carries the wafers in the holder between the openings in the two carriers. ADVANTAGE - Transfer is carried out using the weight of the wafers themselves.

The unit has reel ( 2 ) **carrier** (1) mounted on horizontal platform (3) with side vertical brackets (4) by means of a vertical rod (5) with a retention arrangement, and an arrangement for platform displacement made as balance beam (7) connected to the lifting mechanism. The balance beam (7) has tie rods (8) at the ends. The tie rods interact with the horizontal platform brackets by means of two semi-axles (9).

In order to simplify the servicing, the unit is provided with stands (10) having through vertical cells (11). The platform each vertical bracket has stops (12) for interaction with the stands through vertical cells. The **container** is placed on a table. The retention arrangement consists of a replaceable base, a **double sided screw** (16) which interacts with rod (5) at one end and with nut (7) at the other end. Bul.29/7.8.83.

The **holder** has **two** opposing **carrier** sections (10) between which the memory drive (12) is held. Each carrier section has opening (14,16) to receive fastenings. At least one spacer (28) is provided on the inside of each carrier section. The spacers are preferably arranged in the region of the openings. **Two openings** are provided in each carrier to fasten the drive.

Two spacers are provided in the longitudinal direction of the drive on each side, directly adjacent each opening. The spacers are arc shaped with a curve adapted to the shape of the openings.

ADVANTAGE - Prevents damage to seal between drive housing halves, on inserting or removing drive.

The seat (4) has a basic first seat (8) attached to the motorcycle (1) with a seating recess (9) in the drivers position. The height of the first seat suits a small person. The first seat is completely functional in its own right. A removable second seat (10) with an underside shaped to fit into the seating recess is attached around and on top of the first seat by a detachable holder system (14,15,18). When in position the height of the second seat suits a large person.

The holder system may be made up of two - sided fixing joints (14,15), that sit on the second seat, as side extensions of coating (12) situated below and is laid flat. The seat may be made by forming a recess in a mass produced standard seat, and adding a shaped cushion component.

USE/ADVANTAGE - Used esp. for motorcycles ridden by people of differing sizes e.g. in riding schools or within a family. The seat height is changed quickly and can be sized to suit particular users.

AB- <NV> NOVELTY - A live fish transport tote has flow meter and delivery line that are disposed within a vent hole and lockingly coordinate with the bulkhead fitting and periscope pipe, and mounting brackets lockingly coordinate with the radial arms of the oxygen diffusing system.|

AB- <BASIC> DETAILED DESCRIPTION - A live fish transport tote comprises a modular insulated container formed from a lightweight, durable material. The container further comprises:

- (1) interior and exterior surfaces, the base of the interior surface having mounting brackets;
- (2) an integral base and sidewalls (205), the base and sidewalls having grooves which coordinate with the tines of a forklift;
- (3) a removable lid (240) with a vent hole disposed in the center; and
- (4) an oxygen delivery system comprising an oxygen flow meter having a supply coupling (325), an oxygen supply source, an oxygen diffusing system having radially extending oxygen diffusers (335), and an oxygen delivery line (330).

The vent hole further comprises a bulkhead fitting disposed within the vent hole for securing a periscope pipe (255) and a periscope pipe for venting the tote to the exterior environment attached to the bulkhead fitting. The flow meter and delivery line are disposed within the vent hole and lockingly coordinate with the bulkhead fitting and periscope pipe, and the mounting brackets lockingly coordinate with the radial arms of the oxygen diffusing system. INDEPENDENT CLAIMS are also included for:

- (a) a chemically and biologically balanced aquaculture solution for transporting and storing live fish over extended periods of time with minimal morbidity and mortality;
- (b) a method for preparing a chemically and biologically balanced aquaculture solution for use in transporting live fish over extended period of time; and
- (c) a method for transporting and storing live fish over extended periods of time.

The solution is free from carbon dioxide and ammonia and comprises

Search Report from Ginger R. DeMille

an osmoregulatory salt gradient, an oxygen saturation level to maintain fish, a calcium water hardness level to induce toughening of fish scales, a dynamic pH buffering system, and a bioactive bacterial culture. The solution is maintained at a temperature to induce thermal stasis. The chemically and biologically balanced aquaculture solution is prepared by:

- (a) removing particulate matter from source water;
- (b) filtering the source water through an ammonia remover;
- (c) adjusting the temperature of the filtered water to a temperature to induce thermal stasis in fish;
- (d) removing carbon dioxide from the cooled, filtered water; and
- (e) adding chemical and biological balancing components to the water.

The live fish is transported and stored by:

- (a) harvesting fish and source water into live fish transport totes;
- (b) coordinating the totes with an automated water treatment and delivery apparatus comprising a suction system, a circulation pump, filtration component(s), treatment component(s), and a water dispenser;
- (c) removing source water from the totes by suction system;
- (d) circulating the source water through the filtration component to establish filtered source water;
- (e) circulating the filtered source water through the treatment component to establish a chemically and biologically balanced aquaculture solution;
- (f) returning the chemically and biologically balanced aquaculture solution via the water dispenser to the live fish transport tote; and
- (g) loading the totes into a delivery vehicle.

The fish may be transported and stored within the totes for an extended period of time with minimal stock loss.

USE - For harvesting, storing and transporting live fish (claimed) as well as other seafood species, e.g. crabs, oysters, lobsters, or shrimp.

ADVANTAGE - The invention allows the conventional harvest to order mode of fish farming to be replaced by a continuously maintained inventory of live fish finished goods available for shipment at any time, on a moment's notice.

DESCRIPTION OF DRAWING(S) - The figure shows a side view in cross section of an oxygen delivery system of the in combination of the fish transport tote.

Sidewalls (205)  
Removable lid (240)  
Periscope pipe (255)  
Supply coupling (325)  
Oxygen delivery line (330)  
Oxygen diffusers (335)  
pp; 24 DwgNo 8/11

AB- <TF> TECHNOLOGY FOCUS - INSTRUMENTATION AND TESTING - Preferred Component: The oxygen diffusers further comprise micro-fine silica diffusers. An oxygen supply source is connected to the flow meter via the supply coupling. Preferred Property: The dynamic pH buffering system maintains a solution pH of 6.8-6.9.

INORGANIC CHEMISTRY - Preferred Composition: Calcium is 20-60 ppm. Osmoregulatory salt is 1-10 ppt.

BIOLOGY - Preferred Component: The bacterial culture comprises an activated nitrifying strain of bacteria.

AB- <NV> NOVELTY - The produce bagging machine includes a filling station  
positioned on a support frame, and including a filling chute movable to  
a first position for receiving produce from a produce supply and to a  
second position for delivering the produce into a bag. The filling

Search Report from Ginger R. DeMille

chute may preferably be shaped as a box having a first opening positioned at an upper end for receiving produce, an interior cavity for therein holding the produce, and a second opening or door positioned at a lower end for therethrough delivering the produce. The filling chute door panels form angled walls at the lower end of the interior cavity so as to thereby guide individual pieces of elongated produce, preferably carrots, into substantially parallel alignment as the produce is delivered.

AB- <BASIC> DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for a machine for bagging elongated products, a movable produce bagging machine, and a method of bagging elongated elements.

USE - For bagging produce, especially carrots string beans.

ADVANTAGE - reduces impact damage to the produce and fills the bags in alignment, making bags more attractive to consumer.

DESCRIPTION OF DRAWING(S) - The figure shows the produce bagging machine.

AB- <NV> **NOVELTY** - A peeling film is laminated at back film of bag. **Double sided** and bottom edges of the front and back films are joined through an adhesive layer. Front and back films are welded longitudinally in center of the film by roller (11). Laminate of front film, back film, adhesive layer and peeling film are disconnected by slit (12) after sealing laminate film (9) in specific dimensions.

AB- <BASIC> DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for **delivery bag**.

USE - For handling of parcel delivery service, delivery of goods for golf, and skiing, refrigeration goods, frozen goods for non-store sale and direct delivery.

ADVANTAGE - The amount of generation of refuse and generation of toxic substance during incineration are reduced. Two **delivery bags** are simultaneously formed on the cross-section of the elongated film of raw material and the **delivery bag** is manufactured economically.

Search Report from Ginger R. DeMille

Necessity for classification during discard is eliminated, as the whole bag consists of plastic film. The peeling film is easy to remove and sticking of voucher on the conveyance goods is easy.

DESCRIPTION OF DRAWING(S) - The figure shows the process flow sheet manufacturing method of delivery bag .

A supply of drink is held in especially a plastics bag with a  
tube outlet for delivery direct to mouth. The tube is slung from an  
item of outdoor clothing by a plastics clamp which is attached both to  
the tube and the clothing in a simultaneous action.

The clamp consists of two horseshoe-shaped arms (6) either side of  
a U-shaped pivoting (19) element (21) with a ratchet lock at its  
base. The horseshoe-shaped arms are placed over the tube (100) which is  
then locked in place by the centre-section (21) while the ratchet is  
applied to an item of outdoor clothing e.g. rucksack strap.

ADVANTAGE - The clamp can be attached to any convenient piece of  
outer wear.

LA- US 5682876(8)|

AB- <BASIC> US 5682876 A

The absorber comprises a housing having a first inlet for receiving gas from a ventilator, and a second inlet for receiving gas from a closed bag. An outlet is provided for delivering gas to a patient. A switch within the housing is normally movable between a first position where the first inlet is connected to the outlet and a second position where the second inlet is connected to the outlet.

The locking device affixed to the housing retains the switch in the second position. The locking device further prevents the first inlet from being closed. The locking device comprises a pair of components interfitted together. One of the components retains the switch in the second position and the other of the components prevents the first inlet from being closed. The other component physically enters the first inlet to prevent the inlet from being closed.

ADVANTAGE - provides assurance that the bag to ventilator switch cannot be put in the ventilator position for those applications where a ventilator is not intended to be used, i.e. MRI applications.

LA- US 5582441(8)|

AB- <BASIC> US 5582441 A

The system uses the hollow front bumpers found on most modern vehicles today to store bags of sand, which is delivered through a number of nozzles located in the front of the vehicle. A blower system forces the sand through the nozzles and projects the sand in a wide pattern out in front of the vehicle. The system is designed to operate when the vehicle is braking. Because the sand is disbursed out in front of the vehicle, the tires can better utilize the sand for braking.

Because the sand is projected out in front of the vehicle only a moderate amount of sand is needed to improve traction. The sand delivery system can be tied to a manual switch, the vehicle's brake pedal, or to a computer that is tied into the anti-lock brake systems of a car. In the latter case, sand is only be applied when the anti-lock brake system is activated.

ADVANTAGE - Reduces need for large quantities of sand.

A housing has a proximal portion and a distal portion, with the proximal housing portion including a syringe-receiving port configured as an externally-threaded female fitting that is lockable with the locking fitting when the male tip is inserted into the syringe-receiving port. An internal valve passage is in the distal housing portion, and first and second seats in the proximal and distal housing portions.  
A resilient diaphragm has a normally-closed slit in, with the diaphragm having a proximal side seated against the first seat and a distal side seated against the second seat. The diaphragm has a proximal surface exposed to the syringe-receiving port and a distal surface exposed to the internal valve passage. The syringe-receiving port is axially dimensioned so that the male tip engages the proximal surface of the diaphragm so as to open the slit without penetration through, when the male tip is inserted into the syringe-receiving port.  
ADVANTAGE - Minimal contact force required to open the valve, so allowing the valve to be opened by a minimal degree of insertion of the Luer tip, and provides excellent sealing integrity when closed, so that leakage is prevented when the administration set is used to deliver the contents of the IV bag to the patient.

The package and delivery system comprises a plastic bag sealed around its periphery to define a closure for a catheter having opposed distal and proximal ends contained within the bag. The bag has first and second spaced openings on one surface. The distal end of the catheter is inserted within the first opening.

The portion of the catheter extends from the first opening to the second opening being disposed outside the bag. The remaining portion of the catheter is disposed within the bag through the second opening. On removal of the distal end of the catheter from within the first opening and then threading it through the needle, the catheter is pulled from within the bag through the second opening.

USE - For a catheter to be introduced into a patient through a needle.

The method of tying the open end of a bag comprises (a) gathering the wall of the bag together at an open end of the bag to close the open end, (b) manipulating with one hand an open, arcuate, flexible band made of plastics and having opposed tips to insert the gathered

Search Report from Ginger R. DeMille

bag wall between the opposed tips, which are spaced apart a distance so that the gathered bag can be readily inserted between the tips each of the tips having an interlocking unit, one unit including a pair of flexible inner and outer lip elements extending toward to other unit and spaced apart and aligned with each other to form an open mouth structure.

A tab is carried on the outer lip element, and the other unit includes a tongue element which fits snugly between the lip elements in the open mouth structure, so that the units engage and releasably lock together upon the tips being pushed together manually, and encompass the gathered bag wall with the band and with one hand the tab is grasped and pulled to peel away the outer member from the tongue element to open the band.

ADVANTAGE - Simple economical way of closing open end of transport bags which facilitates quick opening upon delivery .

Search Report from Ginger R. DeMille

A system comprises a bladder (16) supplying ink to a print head (24), and a valve which can be closed, in refill position to convey ink from a main supply bag (14) to the bladder, or in print position to convey ink from the bladder to the head. The bladder is pref. of resilient ethylene-propylene elastomer, and the bag is of aluminium-coated plastics. The bladder can pref. deliver ink at a negative pressure of -1 to -3 inches of water, and all parts are carried by a support plate mounting a plenum chamber (22) in which the valve is located. The valve is pref. a hollow cylinder with two openings near opposite ends and on the same side of the body, a pair of opposed openings near one end at 75 deg. to the first opening, and a rotatable member (50) at this end. USE/ADVANTAGE - Used partic. for a thermal ink-jet printer in a plotter, prevents contact of ink with the air and avoids depriming problems.

The bag slides down an inclined chute, over a slitting knife which cuts a longitudinal slit in the lower side of the bag, on to a rotary drum, where the loose material is sepd. into the product receiving hopper and the empty bag is delivered into a disposal trolley as the drum rotates through a fraction of a revolution.

The drum (4), of polygonal cross section, is freely mounted on the horizontal shaft (5) and is rotated through a fraction of a revolution by the inertia of a bag sliding off the inclined chute (2). The rotation of the drum is restricted by a locking element, which is automatically released every time a bag slides down the chute. The locking element comprises the star wheel (12), which is controlled by the slide rod (8) mounted in the bush (9) attached by the brackets (10) to the underside of the chute. One end of the slide rod engages the star wheel, the other end carries the roller (7). The latter, due to the retaining springs (11), protrudes through a gap in the base of the chute, unless a bag is lying in the chute.

ADVANTAGE - Simple construction and continuity of operation.

The individual elements of a roller chain conveyor, used in a continuous chain to transport items to various work stations in a post sorting office, have a forked jaw (15) at one end and a pair of spigots at the other end. The elements are interconnected by a bolt (17) passing through the forked jaw end, with the mating spigot end positioned between the jaws.

A spherical bearing (18,19) is mounted in the spigot end to allow movement between the elements. At the extremes of the bolt and the spigots, tyred rollers are fixed to run in the horizontal and vertical guides. Selector modules (40) are mounted on the elements by bolts (47,48), which also support the bag carrier.

The delivery system is used in combination with a cardiopulmonary bypass which includes an oxygenator, a roller pump, and typing connecting the patient's heart to the oxygenator so that patient's blood will flow into the oxygenator and the roller pump will pump it out of the oxygenator back into the patient's heart.

The delivery system includes a blood bag for storing a portion of the patient's blood, a Y-shaped tubing having a first end with a single opening and a second end with a pair of openings with the single end mechanically coupled to the oxygenator so that the blood will travel from the oxygenator into the Y-shaped tubing, and a heat exchanger disposed between the blood bag and one of the pair of openings of the second end of the Y-shaped tubing and connected to it so that blood may be pumped from the oxygenator through heat exchanger into the blood bag by a first small roller pump.

The delivery system also includes a stopcock which is connected to the other opening at the second end of the Y-shaped tubing and is also connected to the blood bag so that drugs may be injected into the patient's blood in the blood bag in order to form the cardioplegia solution through the stopcock. A clamping device is used to first clamp off second opening of the Y-shaped tubing and then to clamp off first end thereof. There is also an output tubing and a second small roller pump for pumping the cardioplegia soln. into the heart in order to arrest it.|

AB- PROBLEM TO BE SOLVED: To deploy an air bag into a desired shape even when the upper section of the air bag is located at a position to interfere with a belt member by providing a lock prohibiting means preventing a retractor from being set to the lock state when a side collision load is sensed.

SOLUTION: A belt member 2 is fitted to an occupant like the normal seat belt device. When acceleration/deceleration of the prescribed value or above is applied to a vehicle at the time of a head-on collision, a retractor 6 is switched to the lock state, the delivery of the belt member 2 is blocked, and the occupant is

Search Report from Ginger R. DeMille

constrained. A side air bag is deployed when a shock exceeds the prescribed value at the time of a side collision. An operating member 50 is moved to the indoor side by an obstacle 60, and the retractor 6 is prevented from being set to the lock state. The belt member 2 can be delivered, and an air bag can be deployed into the prescribed shape even when the belt member 2 is located at a position to interfere with the upper section of the side air bag.

AB- PROBLEM TO BE SOLVED: To deliver a module-cum-air bag to a customer of destination in keeping two symmetrical mounting bolts for calmping it to a steering wheel body temporarily held in a stopper attached to a steering wheel intact, and then it is easily rcountable with a driver at the customer for regular installation.

SOLUTION: This is a mounting structure of a set plate 3 equipped with a clamp face to a core bar of a steering wheel body and a vertical rising face orthogonal with the former, and amodule-cum-air bag 2 being attached with a nut 8 and a mounting bolt 9, and in this constitution, the mounting bolt 9 is concentrically held by a mounting bolt fallout preventing stopper 12 attached tight to the side of a lower cover of the steering wheel body, and in this state, a driver is inserted from just beside the steering wheel body, thereby making the mounting bolt 9 project from a hole 6 installed in the vertical rising face of the set plate 3, and it is screwed in the nut 8 on the side of the air- bagmodxlule 2 for installation.

slidably a plurality of sets of longitudinal sealing main bodies on a machine stage and to making their intervals controllable during operation.

SOLUTION: A longitudinal sealing apparatus 10 is constituted in such a way that three sets of longitudinal sealing main bodies 11 are provided and the same site which becomes to a longitudinal edge of an intermittently delivered bag can be completely sealed by heating for three times by means of a pair of heat sealing bars 12. When the position of longitudinal seal is adjusted in being accompanied with the change in size of the bag, if a lock bolt 31 is unfastened to loosen a lock and a handle 26 is rotated, the longitudinal sealing main body 11 is moved on a pair of rails 23 by intermeshing a rack 23a and a pinion 24. Then, the center of the heat sealing bar 12 is fitted to a mark indicating each size of the bag by operating the handle 26 and it is fixed by clamping by means of a lock bolt 31. By applying also this operation to other longitudinal sealing main bodies 11, the interval of each longitudinal sealing main body 11 can be easily adjusted.

AB- PURPOSE: To make it possible to hand over a delivery object without generating any problem even in case the destination is absent by furnishing a waterproof and breaking resistance bag with a character-identified key or cord.

CONSTITUTION: A character-identified key 2 is installed at the tip of a chain fixed to a ring-shaped fixture 1. To make locking, the chain is set around an appropriate building structure, and a lock mounting rod is U shape is set round the fixture 1 and a ring-shaped metal piece 3 fixed to the tip of a zipper, and locking is made. In the case where a customer wishes to receive a delivery object during absence, the customer places an empty, unlocked bag in front of his/her entrance, etc., and the deliverer puts the object in this bag, sets the chain around the building structure, and locks. Thereby the customer can safely receive the object. To hand over any object to the collector (deliverer), who is in advance informed by the customer of the code number of the character-identified lock, and the collector opens the locked and chained bag using the code number for the lock. Thereby the customer can be leave the object safely to the collector, wherein theft is prevented by adopting a material having a high breaking resistance and tying the bag by the chain to a building structure which is hard to move.

SO- Section: C, Section No. 1252, Vol. 18, No. 506, Pg. 87, September 22,  
1994 (19940922)  
AB- PURPOSE: To smoothly and efficiently rupture small refuse bags as well  
and to reduce the size over the entire part of the device by freely  
turnably supporting the front ends of planar blade bodies, the bottom  
end blade parts of which are disposed to face between planar blade  
bodies and making these ends movable by means of a cycloidal moving  
device, thereby easily delivering the clogged refuse bags .

CONSTITUTION: The refuse bags (a) cost into a refuse bag cost hopper  
2 are ruptured by the planar blade bodies 3 of rotating blade bodis 5  
and the planar blade bodies 6, the bottom end blade parts 6a of which  
are disposed to face therebetween in the pendent state from above.  
The refuse bags are then dropped downward and are taken outside a bag  
rupturing machine body 1 by a refuse ejector 9. The moving device 8  
is actuated to move and lock the bottom end blade parts 6a outward  
to deliver the clogged refuse bags (a) in the case the refuse  
bags (a) are clogged between the planar blade bodies 3 and 6. The  
planar blade bodies 6 are thereafter returned again to their home  
positions and the bag rupturing operation is carried out. The  
opposite spacings of the bottom end blade parts 6a and the planar  
blade bodies 3 are adjusted by properly cycloidal-moving the planar  
blade bodies 6 outward according to the sizes of the refuse bags a,  
by which the smooth bag rupturing is assured.

1993 (19931220)  
AB- PURPOSE: To prevent a bag from being taken out illegally by restraining  
a lock pin in the connection groove of a guide member until a sale  
command is issued so that a take-out port door can not be opened, and

2024-Sep-0403:48 PM

Search Report from Ginger R. DeMille

opening the door by releasing the restraining of the lock pin by operating a solenoid when the sale command is issued.

CONSTITUTION: Before the sale command is issued, the solenoid 29 does not operate, and the lock pin 25 is in a standby state in which it is restrained to the restraining groove 27a of a lock shaft guide 27. In this state, an arm plate 22 can not be moved even if the take-out port door 11 is intended to open, and the take-out port door 11 can not be opened. Then, when the sale command is issued, the solenoid 29 operates, and attracts a restraining bar 28, and releases the restraining of the lock pin 25, and the lock pin 15 is moved from the restraining groove 27a of the lock shaft guide 27 to a front guide groove 27c by the spring force of a spring member 23. Next, a moving guide groove 27b is moved forward, and the arm plate 22 too is moved, and the door 11 can be opened.
